EXPERIENCE

TelePrompter Application

Application designed for YouTubers and users who require script text while filming videos.In order to achieve the app's functionality, I created a custom view that enables scrolling text on the user's phone screen. Additionally, users have the option to customize the text speed, color, and even apply a mirror effect to the text for use with the camera mirror.

-MVVM

-Room SQL Database

-Custom View for text scrolling, with text customization (Speed, text size , text color , popup window to use while using other apps, mirror effect)

Note Taking app

application that lets you take notes and securely save them to an online server, accessible from any device, anywhere. This user-friendly application features screens for account creation, password recovery, and login, as well as screens for editing, deleting, and listing notes. With this application, you can conveniently manage your notes on-the-go without the hassle of carrying a physical notebook.

-Firebase (Online server for saving data)
-User account authentication(with Firebase Auth)
-Fragments for fast loading
-Material Design

Working Hours Tracker

Application that tracks your working hours and save them to Database with Custom Calendar view and option to show you how many hours user has made that month.Application is using

- Material design

- Room Sql Database

-Custom Calendar View
